

Cloud API Vault

by Deloitte

The Cloud API Vault is a library of integration assets created by Deloitte’s Cloud API and Integration Practice based on our best practices and enable you to meet Delivery Excellence criteria for your project. It is designed to be used as an accelerator to the Design for Re-Use stage of our development methodology as part of a larger project implementation. The APIs are fully working sample applications, built from Deloitte’s vast delivery experience on various integration technology and iPaaS tools. These pre-built APIs address common integration use cases faced by our clients and enable rapid prototyping leveraging common integration patterns and API development standards and best practices.

FEATURES

Accelerate API Development

With 300+ API assets available in the Vault, it enables faster ramp up for development teams by leveraging fully working sample integration applications in Sales Cloud, Service Cloud, Commerce Cloud, and Marketing Cloud.

Holistic Digital Experience

The redesigned UI offers a connected digital experience to the developers and help the project teams understand the value proposition of the assets. The Vault provides contents that are useful to the development teams (i.e., development standards, templates, and best practices artifacts).

BENEFITS

Reduce up to 40% of API integration development efforts

De-risk project delivery by leveraging industry standards and best practices

More differentiated selling vs our competitors within application pursuits

Cultivates API-first thinking in the organization

Provides top-down view of API during design workshops

Consistent delivery approach for the most complex integration projects
